

Cottrell Associates, Inc.

Large Scale Foam Operations For Crude & Ethanol Oil In Transit

Cottrell Associates - National Foam
Seminar Series

Jim Cottrell will talk about developing logistics (supply chain) strategies for large fires events where big water and big foam supplies are mission critical. These operations were once the purview of specialized industrial fire departments who were or still are relied upon to provide “Big Gun” support whenever needed.

This program is designed to give the attendee an appreciation for what’s needed to support firefighting and or spill security operations at crash events where 50 to 5,000 gpm foam streams are required.

This program is intended for state or regional emergency management supervisors, strategic planners, operations officers, specification writers and combat supply chain managers who now face industrial size fire risks on local roads, rail and maritime lanes.

The attendee will learn the importance of foam stream application techniques, stream reach, fuel coverage and frequency of reapplication.

Large scale demonstrations will show simple foam proportioning and distribution techniques for medium and large foam operations.

Speaker:

Jim Cottrell, of Cottrell Associates, Inc. has been a National Foam factory agent and product development consultant since 1988. His Combat Support Products division manufactures specialty foam firefighting equipment, conducts high hazard risk assessments and special ops. training for industrial, marine and municipal fire markets. foamguy@mac.com

Jim chairs the IFSTA Foam Technical Committee and a member of the Underwriters Laboratories, Foam Standards Technical Panel. He has written extensively on the subject of firefighting foam chemicals, large caliber fire stream, water supply management and foam applications for municipal and industrial firefighting.
